**Subject:** rat poison in syringe from Lowell PD

Paul, Brian McMahon from Lowell PD called me and has a syringe that may have been involved in a murder. He believes there is rat poison in the syringe. Can you guys check for this? If you can, his phone number is 978-937-3218. If not I will call him and let him know. Chuck S

CTRL could detect only the banned Chinese rat poison tetramine by GCMS, The HPLC-FL rodenticide method that env lab has performed would be needed for the primary rodenticides I do not know why the officer suspects rat poison at this point. I have not called.
